SUSTAINABLE GOVERNANCE TRAINING

About the Participating Institutions

Stockholm University
Stockholm University, located in Sweden's capital city, is the region’s centre for higher education and research in humanities, law, the natural and social sciences, and a focus for the work of leading international researchers.

With over 50,000 undergraduate and master's students, 1,800 doctoral students and 5,200 employees, Stockholm University is one of the largest universities in Sweden and one of the largest employers in the capital. People of many different nationalities, with contacts throughout the world, contribute to the creation of a highly international atmosphere at Stockholm University.

The University is situated in the middle of the first National City Park in the world and is characterised by natural beauty, unique architecture and contemporary art and sculpture. The University is located only ten minutes from the urban buzz of the city with people, music, fashion, architecture, culture.

Stockholm Environment Institute (SEI)
SEI is an independent, international research institute specializing in sustainable development and environment issues. It works at local, national, regional and global policy levels. The Institute was established in 1989 following an initiative by the Swedish Government to develop an international environment/development research organisation.

SEI has research centres in Sweden, Estonia, the United Kingdom (York and Oxford), the United States and Thailand. Each of these centres brings a commitment to integrated analyses of complex problems, drawing upon the full range of scientific and policy expertise across the SEI centres.

Running through SEI programmes and efforts is an uncompromising commitment to high ethical standards for the conduct of research and the provision of policy advice.

Ministry of the Environment, Unit for Sustainable Development
The unit, which is headed by Mr. Björn Dufva, coordinates the ministry’s international work on sustainable development and coordinates the activities of all Government ministries as far as they concern sustainable development. Moreover, the unit works on physical planning and construction according to the plan- and construction regulations as well as the efforts to reform the legislation in this area and its implementation. The unit is also in charge of the development of environmental governance instruments like environmental impact assessments.

The Stockholm City Environmental Administration
The administration is the agency responsible for the environment in Stockholm city, both indoors and outdoors. It considers issues like water quality, chemicals, air quality, and hygiene. The chief function of the Environmental Administration is supervision and control.

Stockholm Police
The Stockholm county police is the largest police agency with its 6500 employees, of which 2470 are women. 5000 of these are police officers and 1500 civilians. The Stockholm County Police is led by County Police Commissioner Mrs. Carin Götblad. The Environmental Coordinator Mrs. Janina Grön is in charge of coordinating all aspects of police work that affects the environment.

Hammarby Sjöstad – an eco-friendly part of town
Hammarby Sjöstad is an exciting new district in Stockholm where the City has imposed tough environmental requirements on buildings, technical installations and the traffic environment, from day one.

Stockholm Water Company, Fortum and the Stockholm Waste Management Administration have jointly developed a common eco-cycle model designed to ensure organic recycling throughout Hammarby Sjöstad – known as "The Hammarby Model". This model is the thread that binds together the entire environmental programme and demonstrates how the various technical supply systems are integrated.

GlashusEtt is the centre for environmental communication in Hammarby Sjöstad. GlashusEtt provides tips and advice on how to use the technology and conserve resources. The Environmental Information Centre and exhibition hall is staffed by knowledgeable personnel who answer questions and help guide people into the wonderful world of the environment.

About the presentations

“Overview of the Swedish government, public administration”, Dr. Paul T. Levin.
Dr. Levin introduces some of the characteristic features of Swedish culture, history, levels of government, and public administration. Dr. Levin holds an M.A. in Comparative Politics and a Ph.D. in International Relations from the University of Southern California, Los Angeles and is the Program Director for Stockholm University’s international Governance and Management Training. He also lectures on international relations at the Department of Economic History.

“Environmental mainstreaming”, Stockholm Police Authority Environmental Coordinator Mrs. Janina Grön.
Mrs. Grön describes how she and her colleagues at the Stockholm Police work to integrate concerns with sustainable development into the everyday work of the police as well as her pioneering work on developing environmental impact measures for the authority.

“Managing a sustainable city”, Stockholm City Hall, Director of the Stockholm Environment and Health Administration Mr. Gunnar Söderholm
Mr. Söderholm describes how Stockholm City works with sustainability issues.
“Environmental Policy Integration”, lecturer (to be confirmed) from Stockholm Environment Institute.
A lecturer from SEI will discuss the importance of Environmental Policy Integration (EPI). EPI is the notion that different policy areas, such as economic sectors, environment, and technology/innovation, must be better coordinated and aligned to promote sustainable development.

“Sweden’s strategy for sustainable development”, Ministry of the Environment, Head of Unit for Sustainable Development Mr. Björn Dufva.
Mr. Dufva describes the four strategic challenges which have priority in the revised national strategy for sustainable development: building sustainable communities, encouraging good health on equal terms, meeting the demographic challenge, and encouraging sustainable growth.

“The Hammarby Model” GlashusEtt, Södra Hammarbyhamnen, Mr. Erik Freudenthal.
Mr. Freudenthal presents the core of the environmental and infrastructural planning in Södra Hammarbyhamnen, which can be summarised in an eco-cycle model. The model for the handling of energy, waste and water is known as the Hammarby Model. It has been developed by Fortum, Stockholm Water Company and the Stockholm Waste Management Administration.

“Discussion of sustainable development in Sweden and China” led by Mr. Guoyi Han, Stockholm Environment Institute
Mr. Han engages the participants in a discussion of their experiences during their visit at Stockholm University and what lessons they can apply to their native countries. Mr. Han Guoyi Han, MSc (Environmental Sciences), MA (Human Geography), BSc (Geography), has been a research associate of the Stockholm Environment Institute centre at Stockholm since 2001. Recently, he has been focused on the dynamic nature of human-environmental vulnerability and adaptability, and its assessment in the context of land use/cover change, natural disaster management, and more generally, sustainable development. Prior to joining SEI, he was a Research Programmer for Idrisi GIS at the Clark Labs, Clark University, US (1997-2001), and he was an Assistant Professor at the School of Environment, Beijing Normal University, China (1988-1993).
