Abstract: This SPaDE WP provides aggregate data on housing and housing statistics for Sweden during 1975-2003. The data are collected from national agencies. The data can be linked to individual-level data of The Swedish Housing and Life Course Cohort Study (HOLK) or to other relevant data.

Introduction: HOLK

The Swedish Housing and Life Course Cohort Study (HOLK) is a combination of survey and register data and was collected by the Swedish Institute for Futures Studies (IF) in collaboration with Statistics Sweden in 2005. HOLK was originally designed to study the relationships between housing and childbearing. The sample consists of 3 600 individuals born in Sweden, and is divided between three birth cohorts born in 1956, 1964 and 1974. The response rate was 62 percent or 2 214 individuals. As a whole, the data provides a clear picture of partner biographies, education and labor market attachment, childbearing and last but not least housing biographies. Register data have been linked with additional information on respondents, their legally married partners, and for unmarried cohabitants with children the child's corresponding parent. The cohorts included in HOLK are selected in order to reflect different historical periods in Swedish housing policy and labor market change.

Contextual data

The contextual database described in this Working Paper was collected with the aim to describe housing policy and housing markets during the period 1975-2003 in order to make micro/macro analyses possible with HOLK. A description and discussion of various "critical junctures" in Swedish housing policy is offered in SPaDE WP 2011:3 (Sara Ström, Childbearing Behavior in the Light of Different Housing Regimes: First Births in Sweden 1975-2004). The collection of the contextual database has been financed by the Stockholm University Linnaeus Center on Social Policy and Family Dynamics in Europe (SPaDE) which is hereby gratefully acknowledged. The work with the collection of the contextual database was carried out by Johan Carlsson Dahlberg. The micro level data will be made publicly available at Svensk Nationell Datatjänst (SND, <http://snd.gu.se/>) and a detailed codebook of the micro level data will be published by the Institute for Futures Studies (IF) and the Stockholm University Demography Unit (SUDA).

VARIABLES

- V1** Housing subsidies, by interest contributions etc and housing allowances, 1975-2003.
- V2** Number of families with dependent children in receipt of housing benefits, 1975-2003.
- V3** Treasury bills, three months, 1982-2003.
- V4** Newly produced dwelling units, apartment blocks and detached dwellings, 1975-2003.
- V5** Newly-produced dwelling units, apartment blocks and detached dwellings by region, 1975-2003.
- V6** Newly-produced dwelling units, Greater Stockholm by dwelling size, 1975-2003.
- V7** Newly-produced dwelling units, Greater Gothenburg by dwelling size, 1975-2003.
- V8** Newly-produced dwelling units, Greater Malmö by dwelling size, 1975-2003.
- V9** Newly-produced dwelling units, Sweden excluding Greater Stockholm, Gothenburg and Malmö, by dwelling size, 1975-2003.
- V10** Real estate price index, permanent detached dwellings, 1975-2003.
- V11** Real estate price index, permanent detached dwellings, by region, 1975-2003.
- V12** Average purchase prices sold permanent detached dwellings, 1980-2003.
- V13** Average purchase price per dwelling unit, newly-produced condominiums in apartment blocks, 1980-2003.
- V14** Average monthly rent per dwelling unit, leasehold flats, 1975-2003.
- V15** Average annual rent per square meters, leasehold flats, 1975-2003.
- V16** Average monthly rent per dwelling unit, leasehold flats owned by municipalities, 1978-2003, by dwelling size.
- V17** Housing costs, detached dwellings (interest, amortization, heating, charge, maintenance), 1987-2002.
- V18** Overcrowding by norm 2 (more than two dwellers per bedroom, not counting kitchen and living room) and norm 3 (more than one dweller per bedroom, not counting kitchen and living room), 1980-2002 by 2-year-intervals. Proportion of the Swedish population by age.
- V19** Overcrowding by by norm 2 (more than two dwellers per bedroom, not counting kitchen and living room) and norm 3 (more than one dweller per bedroom, not counting kitchen and living room), 1980-2002 by 2-year-intervals. Proportion of couples with children.
- V20** Overcrowding by by norm 2 (more than two dwellers per bedroom, not counting kitchen and living room) and norm 3 (more than one dweller per bedroom, not counting kitchen and living room), 1980-2002 by 2-year-intervals. Proportion of couples without children.
- V21** Overcrowding by norm 2 (more than two dwellers per bedroom, not counting kitchen and living room), 1980-2002 by two-year-intervals. Proportion of singles without and with children.
- V22** Overcrowding by norm 3 (more than two dwellers per bedroom, not counting kitchen and living room), 1980-2002 by two-year-intervals. Proportion of singles without and with children.

HOUSING SUBSIDIES, HOUSING ALLOWANCES, TREASURY BILLS
