

## The Internal Market - Digital and Social Challenges, HT 2024

The purpose of the course report is to document the students' course evaluation, partly for the department's long-term follow-up of the program, and partly as support in the ongoing pedagogical development work for future courses. The students' views (according to the course evaluation and any other student evaluations carried out during the course), together with the views of the course coordinator/equivalent and any other teaching staff, must be included as a basis for the course report.

The course report should form part of the decision-making basis for the development and modification of courses.

The following documents are included in the course report:

Results from the course evaluation:

Summary of the quantitative university-wide questions.

Response rate, number and percentage.

**Course coordinator/equivalent: Jaan Paju**

No important changes or major decisions on the course have been taken this semester.

Strengths of the course according to the students: Several students point out that they appreciated the seminars. Some would like to see more seminars rather than lectures. Many students have also appreciated the structure of the course with a written exam before Christmas and an assignment at the end of the course after the weekends. The teachers seem to have been appreciated as well.

Weaknesses of the course according to the students: Several students have pointed out that the course literature was not discussed in the lectures and seminars. Some students emphasize that clearer instructions on assignment would have been desirable already early in the course. Some students emphasize that the course is very intense at the beginning with too many lectures and seminars. One student wishes for more focus on GDPR.

Course coordinator/equivalent and possibly other teaching staff's analysis of the course implementation and results: The fall course has gone well.

The students' results were expected given the good mix of program students, exchange students and master students.

Conclusions and possible suggestions for changes and possible decisions already made to develop the course for future courses: Better and clearer information about assignments will be given early in the course. The course literature will be revised. Furthermore, the students' assignment will be changed and AI-secured as it is individualized and followed up.
