Hoards and Stray Finds in Sweden

Hoards  
Gotland, Hogrän par., Djupbrunns

# ROMAN DENARI

## Editorial note

Roman Denarii, Hoards and Stray Finds in Sweden is published by Stockholm Numismatic Institute (Gunnar Ekström chair in numismatics and monetary history) at Stockholm University. Hoards are defined as two or more coins or one coin found together with other objects.

Each issue will cover one or more finds. In the PDF-version the photos can be magnified c. ten times.

The series is edited by Kenneth Jonsson and the layout is made by Ylva Holmberg Jansson.

It is only distributed in PDF-format on the Internet which enables everybody to print it themselves.

After downloading the file it can be printed using Adobe Reader which is available for free at: [www.adobe.com](http://www.adobe.com)

Old numbers in the series can be downloaded at the website: [www.archaeology.su.se/english/stockholm-numismatic-institute/publications-nfg](http://www.archaeology.su.se/english/stockholm-numismatic-institute/publications-nfg).

The rate of publication depends on when a new manuscript is ready.

## Other publications by Stockholm Numismatic Institute - NFG

On our website you will find various publications. Most of them are available as PDF for downloading. Read more on our website:  
[www.archaeology.su.se/english/stockholm-numismatic-institute/publications-nfg](http://www.archaeology.su.se/english/stockholm-numismatic-institute/publications-nfg)

CNS - Coins from the Viking-Age found in Sweden is a project under The Royal Academy of Letters, History and Antiquities. The acronym of the project is CNS based on the title of the publication. (CORPUS NUMMORUM SAECULORUM IX-XI QUI IN SUECIA REPERTI SUNT, CATALOGUE OF COINS FROM THE VIKING AGE FOUND IN SWEDEN). So far c. 259,000 coins have been found. Nine printed volumes were published 1975-2010. They list finds with more than 57,000 coins. The aim now is to publish all remaining finds on the Internet.

Myntstudier is a numismatic periodical in Swedish published on the Internet since 2003 by NFG.

A total of more than 80 seminar papers have been written. They cover the period c. 800-1800. The files (mainly in Swedish) are available for downloading at:  
[www.archaeology.su.se/numismatiska-forskningsgruppen/nfg-s-publikationer/uppsatser](http://www.archaeology.su.se/numismatiska-forskningsgruppen/nfg-s-publikationer/uppsatser)

On our website you will also find information about our research as well as maps showing mints and coin finds in Sweden.

## Roman Denarii Hoards and Stray Finds in Sweden

### Background

Roman Imperial denarii of the first two or three centuries of our era may be regarded as the first coins in Sweden. On the territory of present-day Sweden some 8,000 pieces have been unearthed in modern times, most of them, c. 7,000, on Gotland, the island in the Baltic. Apart from one or two stray finds with Republican coins, the earliest coins belong to the reign of Nero (54-68). Denarii later than AD 200 are rare, and no such coin later than Severus Alexander (222-235) or, perhaps, Gordian III (238-244) can be connected with other denarii, i.e. of an earlier date. With the exception of late Roman and early Byzantine solidi of the fifth and sixth centuries, ancient coins of other origins or denominations are rare or non-existent.

### Find context

Denarii have sometimes been found in the course of archaeological excavations of prehistoric settlements and graves, and, more recently, with the help of metal detectors. In contrast to what is the case in some other countries, however, the metal detector revolution has not dramatically increased the number of known coins in Sweden. The bulk of the coins known and extant has been brought to light casually, most often in the course of agricultural activities. Most of the coins available for study today came to light before 1940.

### Degree of wear

Denarii are rarely found with contemporary coins of other denominations but sometimes with late Roman and early Byzantine solidi.

All denarii found in Sweden are worn, those on Gotland, however, to a larger degree than those from the rest of the country, sometimes making the attribution difficult or impossible. This is as true of extant coins found in the nineteenth century as of those found more recently.

The differences in the degree of wear between the denarii found on Gotland and those from the rest of Sweden have long been known to and discussed by scholars. Sture Bolin in 1926 suggested that the coins on Gotland had been worn through circulation on the island (Bolin 1926, pp. 274-278), but the composition of the large hoards, of which Bolin had insufficient knowledge, makes such a hypothesis unlikely (see Lind 1988 pp. 65-85 and 1993). Most probably the Gotlandic denarii were heavily worn already when they arrived at the island. The difference may be chronological, i.e. the coins which ended up on Gotland may have done so at a later date than those ending up in the rest of Sweden, and/or geographical, i.e. the coins found on Gotland may have had another origin on the European continent than those from the rest of the country.

To the genuine coins can be added a number of barbarous imitations, usually found together with official denarii. They almost exclusively belong to Gotland, and constitute about one per cent of the total number of coins found there. The largest hoard of Roman denarii found in Sweden (and Scandinavia), Sindarve on Gotland, originally 1,500 coins (1,488 extant), has four or five barbarous imitations. Die-links between barbarous imitations found in Sweden and on the European continent have been demonstrated.

## Collections

Most of the denarii available for study are today kept in the collections of the Kungliga Myntkabinettet in Stockholm and the Gotlands Museum in Visby on Gotland. The large number of coins still extant from early finds is due to conditions special to Sweden. On the one hand the country has been spared from wars for a very long time, since 1815, in fact; on the other hand there has been a strict enforcement from an early date of laws concerning finds in the earth. The earliest hoard of denarii from which coins are still extant was found in 1834, and denarius hoards unearthed in the 1860s and 1870s are completely or almost completely preserved.

## The Roman Denarii in Europe

Roman denarii in Sweden are found in the most northerly region of Europe, but they are not, as is well known, the only such coins discovered to the north of the Roman Imperial frontiers. Denarii have been found outside the old Roman Limes in a broad, west-to-east belt, from the North Sea and the Rhine to the Donets Basin (and occasionally even further to the east and north-east). In what is today Poland, for instance, a compass of land never part of the Roman Empire, the number of denarii found may amount to 100,000 or more. Any explanation as to the presence of denarii in Sweden must take those found on the European continent into consideration.

Latest coin: A.D. 194-195

# Gotland, Hogrän par., Djupbrunns

SHM 4877 and 5204

Year: 1873-1874.

Category of find: hoard.

Number of coins: 211 (212).

Other objects: 1 bronze box, 2 gold bracteates, 1 spiral rod, 1 gilt silver ring.

Weight: 573.51 g (212 coins).

**Find circumstances:** The coins and the other objects were found in the so called Hobergsåker, in 1873 and 1874. 200 coins and the box containing the other objects were found in 1873, under a couple of stones, the coins by the farmer Christoffer Johansson and the farm-hand Carl Svensson, the box by the boy Frans Oscar Svensson. In 1874 Carl Svensson found 11 more denarii in the same place as where the other coins had been unearthed.

**Comments:** Although available information says they belong to SHM 4877, i.e. the 200 coins found in 1873, three (3) of the coins in the catalogue below, nos. 22, 166 and 187 might be intrusive, because of their appearance, which differs somewhat from that of the other coins of the find. In contrast to most of the coins of the find, these three coins, probably already in 1873, had been incorporated in the so-called Systematic Collection of the KMK, where no. 166 was kept in the same compartment in the same tray as no. 167, and no. 187 in another compartment together with no. 188, in both cases with notes attached giving the inventory number as SHM 4877. This, however, may in both cases refer only to one of the coins (most probably no. 167 and no. 188 respectively, to judge from appearances), as it is known that coins from finds in Sweden were not strictly kept apart from other coins of the same type in the Systematic Collection in the nineteenth century. No. 22 lay alone in a compartment where there, according to the attached note, originally had been two coins, the missing one most probably that of SHM 4877. The number of coins from this find actually at hand may thus be 209 instead of 211.

On three other coins, nos. 104, 148 and 205, small cuts have been made. These coins are probably identical with the three coins which in 1873, according to the SHM Inv., were selected for metal analysis, giving an average of 80.5 % silver.

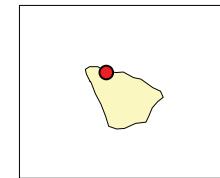

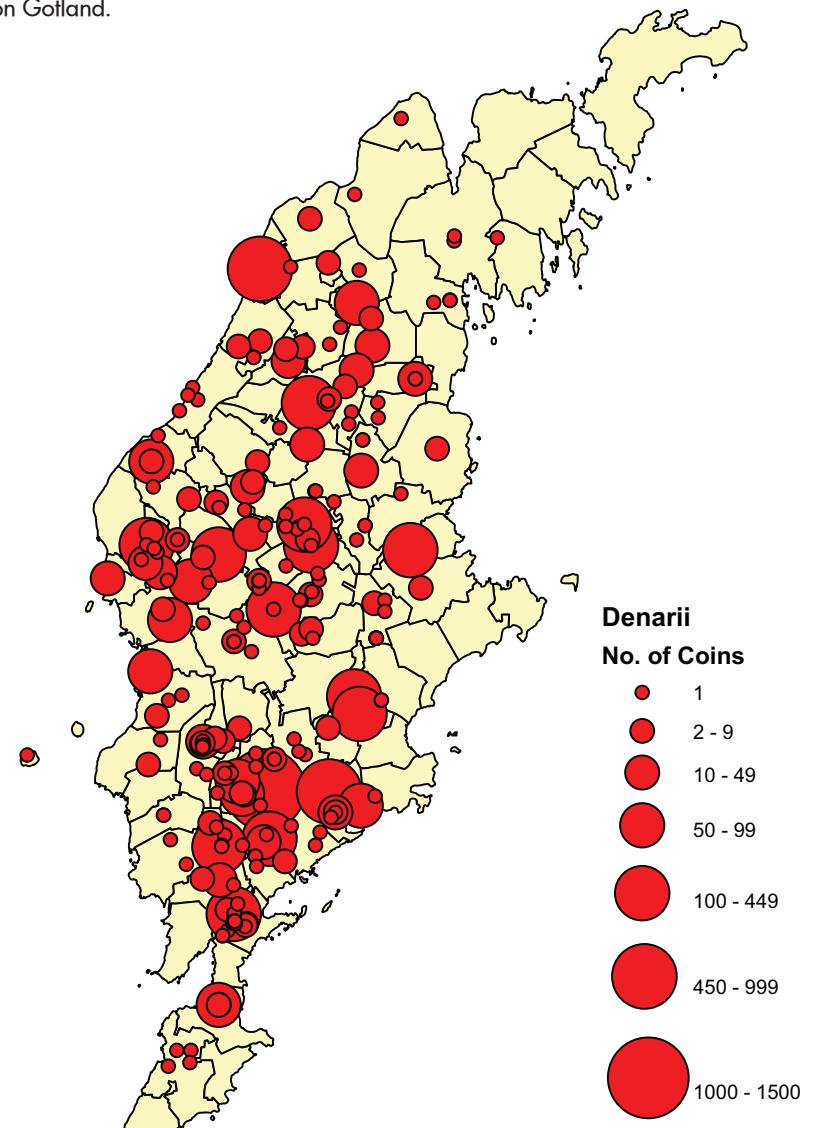

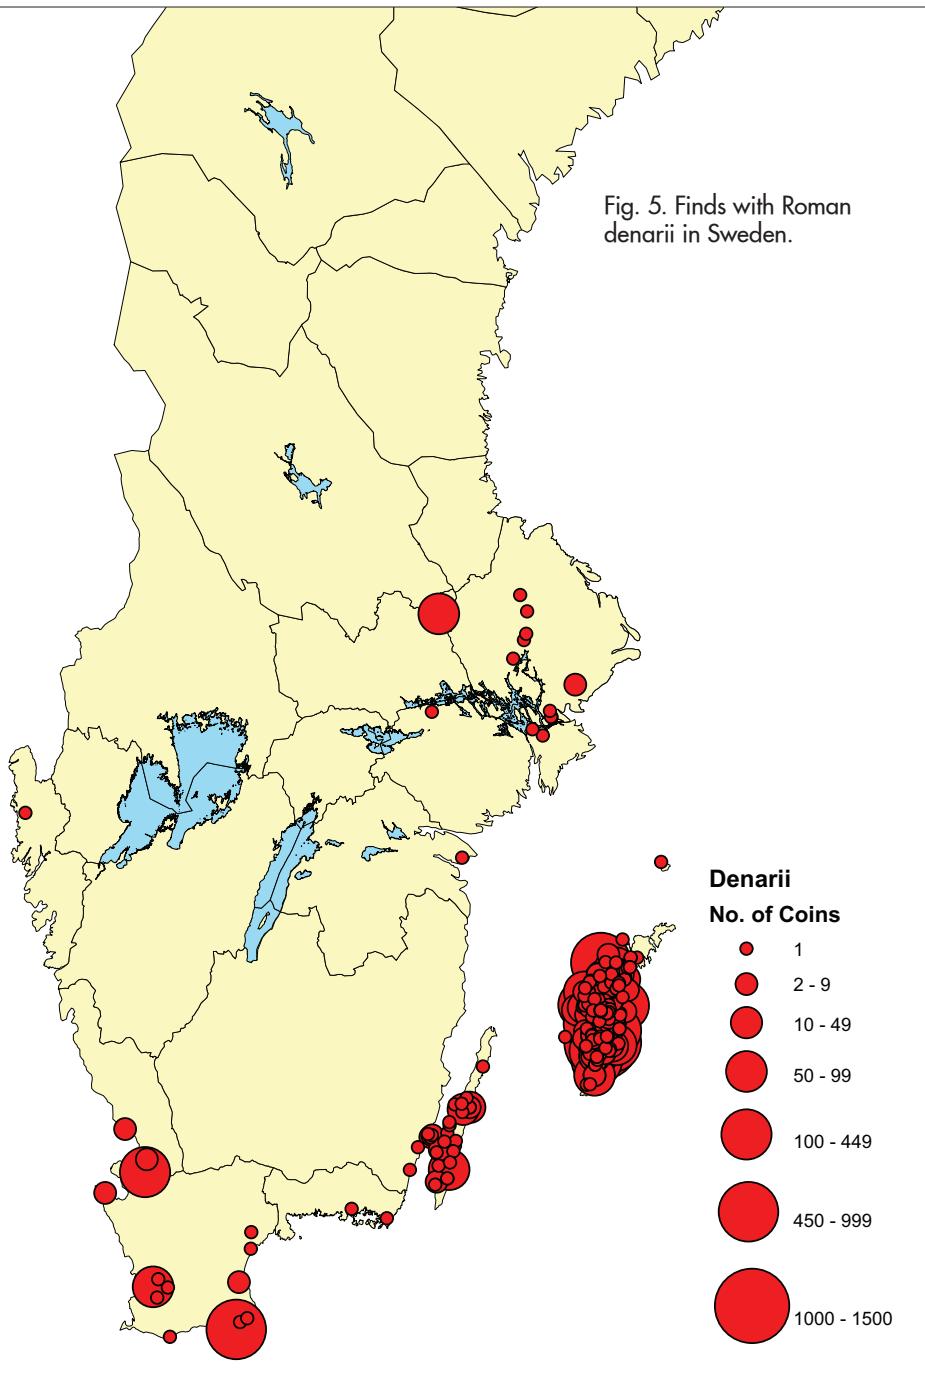

Fig. 6. Finds with Roman denarii on Gotland.

If there are two or more coins with the same RIC no. they have been ordered based on wear.

**Whereabouts:** SHM/ KMK (coins on deposition to Gotlands Museum).

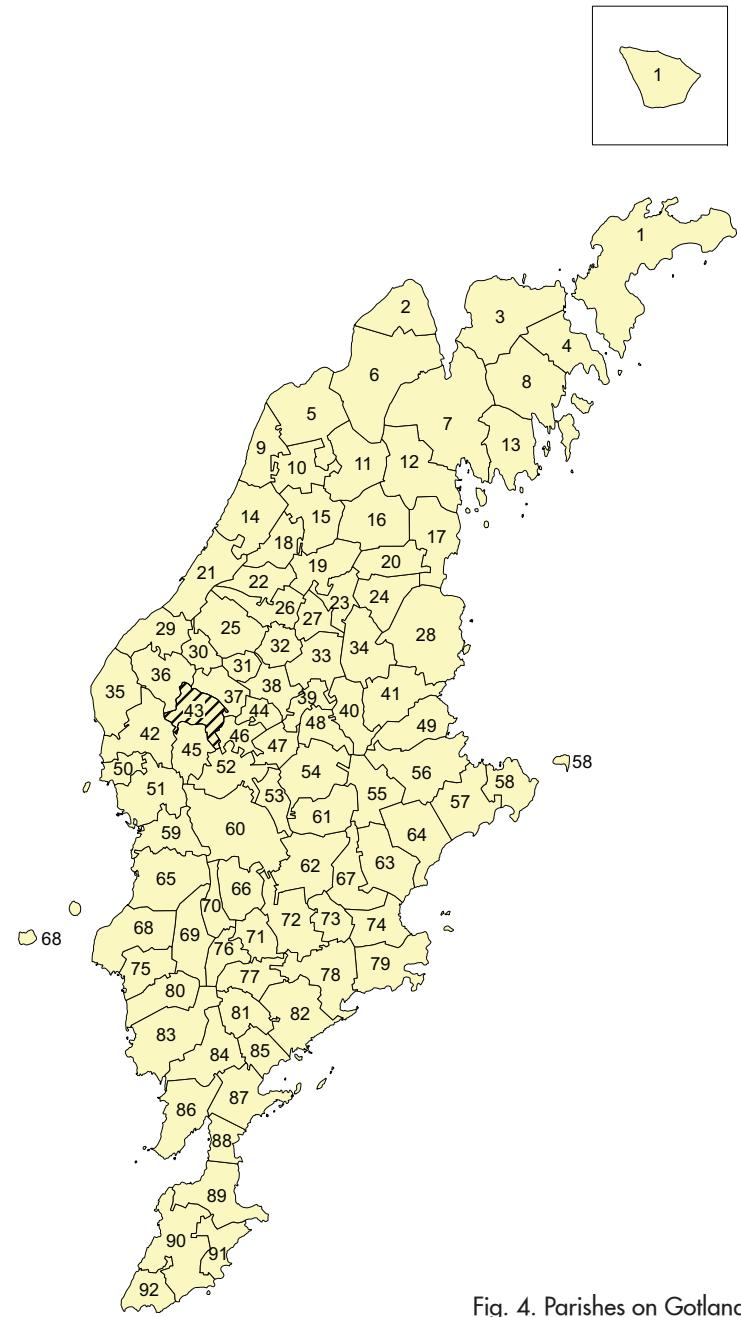

**Sources:** SHM/KMK Inv.

**Literature:** Hauberg 1894, no. 72; Almgren & Nerman 1923, no. 258; Bolin 1926, Bilagor, p. 136, no. 17; Nerman 1935, p. 101; Lind 1981, no. 63; Östergren 1981, no. 65; IK 1, no. 44 and IK 2, no. 233.

## Barbarous Imitations of Denarii

Barbarous imitations of Roman denarii are often found in hoards of denarii unearthed on Gotland. See Lind 1981, 1988, pp. 112-126 and 2007. The hoard of Djupbrunns from 1873-1874 has two, possibly three such coins, no. 211, no. 212 and possibly also the much worn no. 98. Such imitations are fairly numerous in finds on the European continent outside what was once the Roman Empire, and they were prob-

ably made outside the Limes. Imitations in silver of denarii are particularly common in the Ukraine, see; <http://barbarous-imitations.narod.ru/>. No. 212 was regarded as a regular denarius in Lind 1981.

Description: Obverse: ... VSAVC – AD .. M ... Head of Marcus Aurelius (?), laureate, right; reverse: ... III .... Female figure standing left, holding uncertain attribute and spear or sceptre.
