Ritualised heads on stakes – The Stone Age in a new light
The majority of the crania have traces of healed injuries in the same area of the head. It suggests location and these are signs of trauma inflicted with a stone weapon, Arvid Kjellström says, who works at the Stockholm University Osteoarchaeological Research Laboratory and is one of researchers who have examined the dead head in Malå, Sweden.

Meet Ig Nobel Prize Winners at Stockholm University
Can a cat be solid and liquid at the same time? How does a foetus respond to music played in the mother's vagina? How does the ability to lie change within a lifespan? The Ig Nobel Prizes are awarded every year for two achievements that "first make people laugh, and then make them think". Meet three of the laureates.
