Summa	1 (100,0%)

. Description of changes since the last time the course was given.

Description of changes since the last time the course was given.

This year involved a revamp that made all theory and lab online. Most of the materials covered remained the same although given the online nature there was more emphasis on the problem based learning module. There were more readings involved not to mention the demands from the online labs. The labs took a kind of "cooking show" approach with imagined experiments aided with some videos.

. The strengths of the course according to the students (based on the students answers)

The strengths of the course according to the students (based on the students answers)

the students in general appreciated how the course coped with the given constraints. The materials covered were deemed relevant and invited lectures were appreciated.

. The weaknesses of the course (based on the students evaluation)

The weaknesses of the course (based on the students evaluation)

The course was deemed tough (it usually is so) and had too much readings. Many deemed their expectations were not met.

. The teachers analysis on the course execution

The teachers analysis on the course execution

Given the revamp of the course without warning I think we executed the course in a reasonable way. Much credit goes to the lab assistants as well. Students I think feel that giving them more freedom to manage their time is equal to having things not properly scheduled. This is the last advanced course in an MSc program so students should have learned to be more independent and adaptable.

There was deemed too much emphasis on the PBL around the molecule BMAA which seem to reflect a lack of ability to abstract concepts on the part of the students.

. Conclusions as well as suggestion on changes

Conclusions as well as suggestion on changes

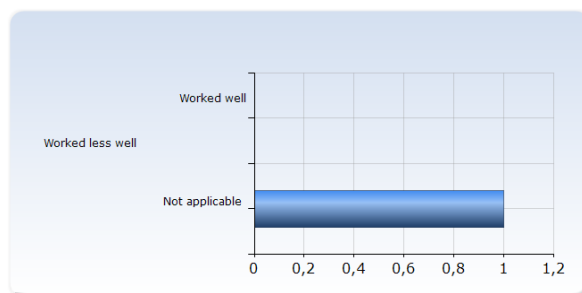

Overall the students found the course tough (as it usually is) but in the end only 2 failed and 1 person got an A with most getting D's. A better introduction to the course and overview could be made to give clearer expectations both from the students and the teacher(s). Again because of COVID the circumstances were quite special.

. Booking and list of participants

1.The prebooked lecture rooms and halls
