

## Analysis of the course and plan for possible improvements

**Course: Course name, course code, semester and year**

**Advanced methods in biochemistry, KB7014, VT20**

*Date: 5-7-2020*

*Course organizer: Jan-Willem de Gier*

*Other teachers: NA*

---

### *Analysis of the course and course evaluations:*

The course had to be adapted to the Corona situation on a short notice; the course was entirely given using Zoom. Quite quickly it became clear that Zoom can be used to teach (a small group of) students and interact with them in a productive manner. In fact, the interactions with the students were more intense and productive than I was used to. Must say that the students were very focused and eager to learn. Most of the time they all attended all activities and actively participated. I would not be surprised if this was (at least partially) due to the extraordinary situation.

---

### *Plan for possible improvements:*

Since nobody really knows what is going to happen this question is difficult to answer. Anyways, whatever happens I will continue using Zoom to teach at least (and record) my lectures and if possible I would give tutorials 'face to face'.  
Lecturing using Zoom goes more slowly; I will better adapt the program to Zoom in the future.  
In the assignments I will include more 'mimics' of the practicals if the situation does not change.
