

Analysis of the course and plan for possible improvements

Course: Biomembranes KB7000 and KB7015, 2020

Date: 20th October

Course organizer: David Drew

Other teachers: Peter Brzezinski, Gunnar von Heijne, Erik Lindahl, Ville Kaila, Martin Ott

Analysis of the course and course evaluations:

91% of respondents gave either 4/5 or 5/5 for overall course satisfaction and course expectation. In response to good teaching all gave either 4/5 or 5/5. Most thought the exam was fair and there was an even spread in word load. Our course is directly linked to the research activities in the department and the active learning exercise implemented last year were well appreciated. Overall, I am pleased with the feedback from the course

Plan for possible improvements:

There was no consensus feedback, apart from 2 people mentioning that we should record lectures. However, most commented that their most important advice is to attend all lectures. I am hesitant to record lectures as this may lead to less people attending lectures. Improvements can be made by including more schematic summary slides to complement the research-lead lectures.
