ENGLISH CODEBOOK

Level of Living Survey

2000

This code book includes the variables in the data set by December 2010

TABLE EXPLANATION

1	2		3
X619	GROSS SALARY PER HOUR		jfr Y472, jfr U443, jfr V727, jfr W650
	4	Gross salary in SEK per hour, calculated by adding X611 - X618 converted into hourly wage by using X602. This variable is divided into categories.	
		30-39	3 0,1
		40-49	5 0,2
		50-59	14 0,5
		60-69	62 2,1
		70-79	192 6,4
	5	80-89	477 15,9
		90-99	525 17,6
		100-199	1572 52,6
		200-299	108 3,6
		300-399	24 0,8
		400-499	5 0,2
		500-599	2 0,1
		800-899	1 0,0
		1000-1999	1 0,0
		Total	2991
		9999 No answer	133
		Not employed last week	2018
			5142
		Mean value	116,46
		Standard deviation	55,37

- Variable number.** Every variable has a serial number, which can be used as identification when processing data. Not all numbers from X1 to X1154 exist.
- Variable name.**
- References** to corresponding variables in LNU68, LNU74, LNU81 and LNU91.
Jfr (compare) means that the variable (or question) doesn't have exactly the same construction in the other surveys. Note that the possible answers can be different even if the question that the variable is based on is identical for all years.
- The exact wording of the question** and/or an explanation of the construction of the variable and selection, if any (i.e. information on who the table is valid for).
- The code**, that in this example equals kronor per hour. Some variables, like this one, are divided into categories. Note that the categories can be of different sizes. If the code equals a possible answer (e.g. 1=YES), this is stated.
- Number of respondents.**

7. **Percentage** is calculated based on the number of respondents. Percent is not calculated for decline and the like.
8. The category that is **not selected** and how large this is.
9. **Mean value and Standard deviation.** The Mean value and the Standard deviations for variables divided in categories are calculated based on actual values and not interpolated medians.
