### RA6 Funding of small projects or specific activities

To those of you working with deep-time climate/biodiversity research, we invite short proposals for funding of small projects or specific activities, related to your research. The time scales involved could be from ice-age cycles of the Pleistocene-to the Proterozoic (orbital to tectonic time scales).

## Aerosols and climate modelling - meet new Bolin member Sara Blichner

In May this year, Sara Blichner started as a post-doctoral researcher at the Department of Environmental Science. She has contributed to the latest IPCC report and is now involved in EU's FORCeS project.

## Losses of eelgrass beds give rise to large emissions of carbon and nutrients

Losses of important eelgrass meadows in western Sweden since the 1980s have led to considerable bottom erosion and the release of carbon and nitrogen; substances that contribute to increasing climate change and eutrophication. This is shown in a new study by researchers at the University of Gothenburg, Stockholm University, Åbo Akademi University and the University of Southern Denmark, published in the journal *Ecosphere*.

## Forskare visar snabbare minskning av Arktis havsis i framtiden med ny metod

Arktis minskande havsis kan smälta bort tidigare än vad forskning hittills visat. Redan så snart som omkring år 2035 kan Arktis vara helt isfritt på sommaren vid höga klimatpåverkande utsläpp, före 2050 vid låga klimatpåverkande utsläpp. Det har två av SMHI:s forskare kommit fram till när de undersökt Arktis havsis utifrån de globala klimatmodeller som har varit bäst på att återspeglar den observerade utvecklingen av Arktis havsis och havsvärmetransport till Arktis sedan 1979.
