I'm interested

Do you enjoy working with healthcare data and developing methods that bring value? Do you want to participate in research that can benefit patients around the world?

UMC is opening master thesis positions for 2023. We are looking for creative and motivated students with a background in statistics. If that is you, please contact us to find a project that excites you! We have a list of project ideas, and you will have a part in formulating the goal and methods to be used in your project. Previous projects can be found here (https://who-umc.org/careers/opportunities-for-students/).

Uppsala monitoring centre is a dynamic non-profit organization with the mission of improving the safety of medicines throughout the world. By managing and analyzing VigiBase, WHO's global database of reported potential side effects of medicinal products, consisting of more than 35 million reports from patients and health care professionals in more than 150 countries, UMC is internationally recognized for its unique role in detecting the adverse effects of medicinal products.

Techniques that may be used depending on the project:

- R, Python, SQL, Git, AzureDevOps

- Agile ways of working

Benefits for you:

- Situated centrally in Uppsala, possibility to work both from the office or other location

- You will be part of a team and be mentored by UMC employees

- Work in an international and inclusive environment
