

## PhD Course Feedback

The opinions in this document relate to the PhD courses hosted at the IGV and the section. They were collected during meetings open to the entire PhD group at IGV. Considered were: relevance of the course content, work effort in relation to course points, examination forms, literature, fulfillment of the learning objectives, suggestions for changes to future course opportunities and tips for future students.

### 2022:

#### Ethics

- Could step away from the theory and discuss gray scale more
- Good amount of material and time
- Would be better in person rather than online
- Relevant topics

*This information was forwarded to the organizers. The course went under an organizational shift at the beginning of 2023. The course is now in person.*

#### Seminar Series Course

- Quite a few geology heavy talks
- Would be good to broaden acceptable lectures
- Better with more feedback from supervisors

*This information was forwarded to the seminar series organizers and more types of presentations now acceptable to include. We have been revisiting how the supervisor deals with it submissions.*

#### Swedish Geology

- Could be more dynamic
- A little dry, read and repeat
- Nice with flexible format
- Not entirely relevant in all cases

*This information was forwarded to the organizers.*

### 2023:

#### Ethics

- Could have more examples of good and bad research
- More grey cases
- Workload fair for number of points

*This information was forwarded to the organizers.*

### Seminar Series Course

- Generally appreciated and it achieves the ILO of widening perspectives on geological sciences
- Suggest that students submit abstracts instead of summaries so it is more “real world”

*We have been revisiting the format of the summary and how the supervisor deals with it but it is likely that we will discontinue this course in 2024.*

### Swedish Geology

- In general good but an old school style, knowledge not really tested
- Could be better to have project portion more connected to PhD's topic

*This information was forwarded to the organizers but it is likely that we will discontinue this course in 2024.*
