Note: There are an awful lot of papers here. I do not, of course, expect participants to read everything advance! These are *suggested* readings in case you want to follow up on issues that we will talk about. Nothing on this list is presupposed for any of the sessions. The Nolt book in particular is large, dense, detailed (and occasionally tedious). For section 2 I had in mind sections 1.1-1.5 in chapter 1 as possible introduction, and for section 3, chapter 6.

I have set up a Dropbox with all the materials in it. This should get you there:
